Abstract

The 2002 Survey of Inmates in Local Jails was conducted for the Bureau of Justice Statistics by the U.S. Census Bureau. This survey, conducted every 5 to 6 years, provides nationally representative data on persons held prior to trial and on those convicted offenders serving sentences in local jails or awaiting transfer to prison. Similar surveys of jail inmates were conducted in 1972, 1978, 1983, 1989 and 1996. From January through April 2002 Census Bureau interviewers collected data on individual characteristics of jail inmates; current offenses, sentences and time served; criminal histories; jail activities, conditions and programs; prior drug and alcohol use and treatment; medical and mental health conditions; and health care services provided while in jail.

The interviews, about an hour in length, used computer-assisted personal interviewing (CAPI). With CAPI, computers provide the interviewer with the questions, including followup questions tailored to preceding answers. Before the interview inmates were told verbally and in writing that participation was voluntary and that all information provided would be held in confidence. Participants were assured that the survey was solely for statistical purposes and that no individual could be identified through the use of survey results.

Summary Data Description

Time Period: 2002

Date(s) of Collection: January 1, 2002 - April 31, 2002

Country: United States

Geographic Coverage: United States

Geographic Unit: Region

Unit of Analysis: Individuals

Universe: The sample for the 2002 survey was selected from a universe of 3,365 jails housing 529,084 adult males, 67,464 adult females and 9,449 juvenile (both male and female) inmates. The universe consisted of the facilities enumerated in the 1999 Census of Jails.

Kind of Data: Survey data

Methodology and Processing

Data Collection Methodology

Time Method: Cross-section

Data Collector: United States Department of Commerce. Bureau of the Census

Sampling Procedure: The sample design was a stratified two-stage selection, in which jails were selected in the first stage and inmates to be interviewed were selected in the second stage. In the first sampling stage, using a target jail sample size of 460, six separate strata were formed based on the size of the male, female and juveniles populations in each jail:

1. Stratum 1 consisted of 38 jails that held more than 40 juvenile inmates regardless of the adult male and female populations.
2. Stratum 2 consisted of 191 jails that held more than 1,500 adult male inmates or more than 75 adult female inmates, and 40 or fewer juvenile inmates.
3. Stratum 3 contained 83 jails that held between 501 and 1,500 adult male inmates and 75 or fewer adult female inmates, and 40 or fewer juvenile inmates.
4. Stratum 4 consisted of 326 jails that held between 201 and 500 adult male inmates and 75 or fewer adult female inmates and 40 or fewer juvenile inmates.
5. Stratum 5 contained 1,171 jails that held between 41 and 200 adult male inmates and 75 or fewer adult female inmates and 40 or fewer juvenile inmates.
6. Stratum 6 contained 1,556 jails with 40 or fewer adult males and 75 or fewer adult female inmates and 40 or fewer juvenile inmates.

A major goal of the 2002 sample design was to ensure that jails with large numbers of males, females, or juveniles had a higher probability of selection than the jails with a small inmate population. In strata 1 and 2, all 229 jails were selected. Strata 1 contained all jails that housed more than 40 juvenile inmates regardless of the number of adult male or female inmates. Strata 2 contained jails with either a large number of adult male inmates or a large number of adult female inmates or both.

The remaining 231 jails were proportionately assigned to strata 3 through 6 based on the size of the inmate population. A systematic sample of jails was selected for strata 3 through 6 using the jail take-every (TEs) that was based on the inmate populations within the stratum: 1 in every 2 jails were selected from Stratum 3; 1 in 4 were selected from Stratum 4; 1 in 13 from Stratum 5; and 1 in 74 from Stratum 6. Each jail within a stratum had an equal probability of selection.

One modification was made to the first stage sample after the jails had been selected. One of the originally sampled jails was in actuality a jail jurisdiction with eleven jail facilities. The facilities were sub-stratified by gender of inmates housed and jails were selected with probability proportional to size. Four facilities were selected and added to stratum 1. Overall, 465 jails were selected in the first stage sample. Interviews were conducted in 417 jails; 39 refused and 9 were closed or had no inmates to survey.

In the second sampling stage, interviewers visited each selected facility and systematically selected a sample of male, female and juvenile inmates using a predetermined random start and sample selection rate. All specific types of inmates in a sample jail had equal probabilities of selection. In total 7,750 names were drawn for the sample: 1 in every 92.01 males, 1 in every 26.99 females, and 1 in every 12.60 juvenile inmates (See Appendix Table A).

A total of 6,982 interviews were completed and 768 were non-interviews, including 263 inmate who refused to participate, 407 inmates who had been released after sampling (i.e., transferred to another facility, out to court, or other types of release), and 98 inmates who could not be interviewed due to medical, security or other administrative reasons (See Appendix Table B.). The second stage non-response was 9.9% (the number of non-interviews divided by the number of completed interviews and the non-interviews). The total non-response from both stages was 15.9%. Because of the sample design, State, local, or other subnational estimates cannot be made.

Type of Research Instrument: Structured

Weight: Through the application of weights and a series of adjustments, the data for the 2002 SILJ were weighted so that the sum of all sample weights would equal 631,241 (which was the total number of inmates in local jails on June 30, 2001, estimated by the 2001 Annual Survey of Jails). The weighting procedure consisted of a base weight for each inmate and four adjustment factors that produced the final weight for the survey. These adjustments were:

- The Jail Noninterview Adjustment
- The Inmate Noninterview Adjustment

- The 1999 National Jail Census (NJC) Ratio Adjustment
- The 2001 Sample Survey of Jails (SSJ) Ratio Adjustment

Calculating the Base Weights

The base weight (BW) is calculated from two probabilities: 1) the probability of selecting a jail for sample and 2) the probability of selecting an inmate for sample. The probability of selecting a jail for sample includes selecting a jail in either the original sample or in the jail system that was included on the jail universe file. The probability of selecting an inmate from a sample jail included any adjustments made to the sampling rates. The sampling rates differ by inmate type (male, female, juvenile). Every inmate in a given jail and of a specific inmate type had the same base weight.

The formula for determining the base weight was:

Baseweight = (1/Prob. of selecting jail i) X (1/Prob. of selecting inmate m)

The base weight was adjusted for the Cook County Illinois jail system (CCAF) that was selected in the SILJ sample. Interviews were conducted in a subsample of the eleven facilities that made up the jail system.

Jail Noninterview Adjustment Factor

This Jail Noninterview Adjustment Factor (JNAF) modified the base weights to account for the sampled jails that refused to participate. The adjustment was defined as the sum of the 1999 Census of Jails population for interviewed jails and jails that refused to participate by stratum and inmate type, divided by the 1999 Census of Jails population in the interviewed jails by stratum and inmate type.

Inmate Noninterview Adjustment (INAF)

The Inmate Noninterview Adjustment Factor (INAF) modified the weights to account for the noninterviewed inmates. Basic demographic data on noninterviewed inmates were obtained by survey interviewers from jail records. Inmate records, including non-interviewed inmates, were separated by detention status into convicted, unconvicted and those with no offense or undetermined offense by age, by sex, by race (black and nonblack) and by stratum number (see Appendix Table C.). A non-interview adjustment factor was created by the sum of the jail noninterview adjusted weights for inmates categorized as interviewed, by noninterview cell. The noninterview cells were collapsed when there were less than 30 interviewed records or the INAF was greater than 2.0000 for the cell.

1999 National Jail Census Adjustment

The 1999 National Jail Census Adjustment Factor (RC) controlled the survey data to the 1999 Census of Jails population numbers used in generating the sample. This ratio adjustment was performed within cells defined by sex and the six strata (See Appendix Table D). The census ratio adjustment factor was defined as the ratio of the census count divided by the weighted count of inmates.

2001 Annual Survey of Jails Adjustment

The Annual Survey of Jails Ratio Adjustment (ASJRA) controlled the inmate population count to the count of inmates obtained from the 2001 Annual Survey of Jails. The adjustment was calculated separately for males, females and juveniles. The ASJRA was then defined as the ratio of the weighted number of inmates from the Annual Survey of Jails to the weighted number from the survey as calculated. For males, ASJRA = 551,007/M; for females, ASJRA=72,621/F; and for juveniles ASJRA=7,631/J.

Calculation of Final Weight

All adjustments were applied to the baseweights to produce the inmate's final weight (FINALWT) as:

FINALWT = BASEWT(i, t) x CCAF x JNAF(s, t) x INAFcell x RCcencell x RSt

where

BASEWT(i,t) = Baseweight for inmates in jail i, by inmate type t

CCAF = Jail System Adjustment

JNAF(s,t) = Jail noninterview adjustment factor for stratum s, by inmate type t

INAFcell = Inmate noninterview adjustment factor for the appropriate noninterview cell

RCcencell = 1999 NJC ratio adjustment factor for the appropriate ratio adjustment cell

RSt = 2001 SSJ ratio adjustment factor, by inmate type t

Data Appraisal Information

Response Rate: The total non-response from both sample stages I and II was 15.9%. Because of the sample design, State, local, or other subnational estimates cannot be made.

Estimates of Sampling Error: The accuracy of estimates based on the Survey of Inmates in Local Jails depends on sampling and nonsampling errors. If a complete census of jail inmates had been taken using the same survey questionnaire, instructions, and enumerators the distributions may differ from estimates generated from the sample of jail inmates. Because of the sampling and nonsampling variability, caution should be taken when interpreting results based on a relatively small number of cases or on small differences between estimates.

Nonsampling variability

Nonsampling variability may be due to response or nonreporting errors. There are many sources of nonsampling errors, such as inability to obtain information about all cases in the sample, definitional difficulties, differences in the interpretation of questions, inability or unwillingness to provide correct information on the part of respondents, inability to recall information, errors made in processing the data, errors made in estimating values for missing data, and failure to represent all inmates with the sample (undercoverage). The full extent of the nonsampling error is unknown.

Sampling variability

Sampling variability occurs by chance because a sample was surveyed rather than the entire inmate population. Standard errors are primarily measures of sampling variability, although they may include some nonsampling error. The sample estimate and its standard error enable researchers to construct a confidence interval around the estimate, a range that would include the average result for all possible samples with a known probability. For example, if all possible samples were surveyed under essentially the same general conditions and using the same sample design, and if an estimate and its standard error were calculated from each sample, then approximately 95 percent of the intervals from 1.96 standard errors below the estimate to 1.96 standard errors above the estimate would include the average result of all possible samples. The sampling error, as measured by an estimated standard error, varies by the size of the estimate and the size of the base population.

Estimates of the standard errors for selected characteristics have been calculated for the 2002 survey of jail inmates. (See BJS publications, Profile of Jail Inmates, 2002 and Substance Dependence, Abuse, and Treatment of Jail Inmates, 2002, available on the BJS website.). For example the 95 percent confidence interval around the percent of inmates in 2002 who were in jail for a violent offense is approximately 25.4% plus or minus 1.96 times 0.61% (or 24.2% to 26.6%). The 95 percent

confidence interval around the percent of inmates in 2002 who were dependent on or abused alcohol or drugs is approximately 68% plus or minus 1.96 times .72% (or 66.6% to 69.4%).

Significance testing

The standard error estimates may also be used to test the statistical significance of the difference between two sample statistics such as comparing the difference between male and female in jail for a violent offense. Significance tests may be performed by taking the square root of the sum of the squares of the standard errors of the two sample estimates at various levels of significance, where a significance level is the probability of concluding that the characteristics are different when, in fact, they are the same.

To conclude that two parameters are different at the 0.05 level of significance, for example, the absolute value of the estimated difference between characteristics is greater than or equal to 1.96 times the standard error of the difference. This means that, for most differences, the estimated difference between parameters is greater than approximately twice the standard error of the difference.

An example would be comparing the percent of male inmates, 26.5%, and female inmates, 17.1%, held for a violent crime. The standard error of the difference would be 1.12 (or the square root of the sum of the squared standard errors for males and females). The 95% confidence interval around the difference would be 1.96 times 1.12% (or 2.20%). Since the observed difference of 9.5% (26.6% minus 17.1%) is greater than 2.20%, the difference would be considered statistically significant.

The standard error estimates were derived using a software package developed for generating standard error estimates for data obtained from a complex survey design. Variables have been added to the restricted access data file to be used in running software packages which calculate standard errors.

INTRODUCTION

Hello, my name is ... I am a field representative for the United States Census Bureau. Here is my identification card. We are conducting the Survey of Inmates in Local Jails for the Bureau of Justice Statistics. Here is a letter that will further explain the survey.

Before we begin, I would like to tell you that all answers you give are strictly confidential. Your responses cannot be released to anyone at this prison or to anyone else in any way that could identify you. Also, this survey is completely voluntary. If you do not want to answer any questions, please tell me.

h_RELEASE STATUS

SUPERVISED OR CONDITIONAL Release - The release from a Federal, State or local correctional facility of an inmate who has not served his or her full sentence and whose freedom is contingent upon obeying specified rules of behavior.

ESCAPE - An offender on escape has fled from a prison, jail or other correctional facility without an official release from physical custody. Also, an offender on escape may fail to return to a correctional facility after authorized leave.

PAROLE - An offender on parole was conditionally released from a prison by a parole board prior to completion of sentence. While on parole, the released offender is placed under the supervision of a parole agency and must obey all conditions set forth by the parole authority.

PROBATION - An offender on probation is free as long as the person meets certain conditions of behavior. If the freedom is granted by a judicial officer, judge, or court, it is called probation from court. If the conditional release is granted after the offender has served time in a correctional facility, it is probation from prison.

SHOCK PROBATION/SPLIT sentence - A sentence requiring the convicted person to serve a period of confinement in a local, state or federal facility followed by a period of probation. The term is often used for sentences to boot camp, followed by supervision in the community.

COMMUNITY RELEASE - An offender on furlough, work or study release, day or weekend reporting, alcohol or drug diversion counseling, or electronic monitoring or house arrest

PRETRIAL RELEASE - An offender on bail or bond, release to own recognizance, release to the custody of another person, on electronic monitoring or house arrest while awaiting trial or adjudication.

Alford plea - A guilty plea to a charge by the defendant, despite his claim of innocence, because the evidence of guilt is overwhelming. Usually the plea is to a charge less than the original charge. The defendant agrees to plead guilty because he realizes that there is little chance to win acquittal on the original charge because of the strong evidence of his guilt.

No contest plea - A defendant's formal answer in court to the charge(s) contained in a complaint, information, or indictment, stating that he or she will not contest the charge(s), but neither admits guilt nor claims innocence.

Guilty plea - A defendant's formal answer in court to the charge(s) contained in a complaint, information, or indictment, stating that he or she will not contest the charge(s) and admits that he/she committed the offense(s) listed.

Not guilty plea - A defendant's formal answer in court to the charge(s) contained in a complaint, information, or indictment, claiming that he or she did not commit the offense(s) listed.

OFFENSE MATCHING
If the computer doesn't match on the controlling offense, you must classify the controlling offense into one of these four categories -

Violent Offense (FR_INST_5A, 5B, 5B1)
Property Offense (FR_INST_5C, 5D)
Drug Offense (FR_INST_5E)
Other (S5Q1)

1) Refer to the offense presented on the screen.

2) Review the different offenses listed under any of the FR_INST and determine if the offense is similar to the listed offenses.

Violent Offense - an offense in which a victim is involved. In a violent crime, the offender must physically harm or threaten to harm a person.

Example: A man is armed with a gun and robs a woman. Even though the woman is not harmed, she was physically threatened by the robber. This is a violent crime.

Drug Offense - any offense that involves the illegal possession, manufacturing, distribution, sale or use of a drug.

Property Offense - any offense in which property is taken, damaged, or destroyed directly or by fraud or deceit. Any offense involving the illegal possession, sale, distribution or use of money or property. General categories include arson, burglary, fraud, larceny, motor vehicle theft, stolen property, and theft.

EXAMPLE 1: (MATCHING OFFENSE)

Handguns include both pistols and revolvers. They are firearms held and fired with one hand.

Rifle is a firearm intended to be shot from the shoulder. It has a long barrel which shoots bullets.

Shotgun is a firearm intended to be shot from the shoulder with either a single- or double-barrel for firing shot (a concentration of small pellets) at short ranges.

Semi-automatic gun is a firearm in which a shell is ejected and the next round of ammunition is loaded automatically from a magazine or clip. The trigger must be pulled for each shot. Semiautomatic guns should be classified as either handguns, rifles, or shotguns.

Machine gun is an automatic gun which, if the trigger is held down, will fire rapidly and continuously. It is NOT a semi-automatic gun, for which the trigger must be pulled for each shot.

Toy gun or BB gun - A BB gun shoots a single pellet, using air rather than an explosive to propel the pellet. Toy guns are not firearms.

Handgun Definitions

Handguns include both **pistols** and **revolvers**. They are firearms held and fired with one hand.

Revolver is a handgun with a revolving cylinder with several cartridge chambers. The chambers are successively lined up with the barrel and then discharged.

Derringer is a short-barreled, single shot pocket pistol. A pistol has a chamber integral with the barrel.

Conventional semiautomatic pistol - a firearm that can be held with one hand. The shell is ejected and the next round of ammunition is loaded automatically from a magazine or clip internal to the pistol grip or handle. The trigger must be pulled for each shot. A maximum of 19 bullets can be stored in the

magazine.

Military-style semiautomatic pistol - is similar to a conventional semiautomatic pistol except that the magazine or clip is visible and can hold more than 19 bullets. Primary examples are the UZI, TEC-9 and MAC-10.

Sawed-off shotgun - A shotgun in which the barrel has been shortened or sawed off and is less than 18 inches in length. Any kind of shotgun can be sawed-off.

Bolt-action, pump-action, lever-action, or single shot shotgun - Bolt-action, pump-action, and lever-action shotguns require physical movement by the operator of some part of the shotgun - a bolt, lever, or pump - to reload. A single shot shotgun must be loaded after each shot.

Semiautomatic hunting-style shotgun - A shotgun in which a shell is ejected and the next round of ammunition is loaded automatically from a magazine or clip. The trigger must be pulled for each shot.

Semiautomatic military-style shotgun - Has the characteristics of a semiautomatic hunting-style shotgun. In addition, the shotgun has military features, such as a pistol grip, folding stock, and a detachable magazine or clip. It can be shot from the hip and looks like a semiautomatic military-style rifle.
